DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species:

Species of figure 3

Species of figure 4

Species of figure 5

Species of figure 6

The species are independent or distinct because:

The species of figure 3 drawn to a test circuit for identification of locations with low speed performance includes ring oscillator units 31, switches 321, 322 and 323, and element pairs 33 and 34.

The species of figure 4 drawn to a test circuit for identification of locations with low speed performance includes ring oscillator units 41 and a switch control circuit composed of inverters 451, 452 and 453.

The species of figure 5 drawn to a test circuit with the ring oscillator unit 51 has two inverter strings 511 and 512 rather than two inverters.

The species of figure 6 drawn to a test circuit with the ring oscillator unit 61 has two inverter strings 611 and 612 rather than two inverters.

The inventions as claimed are not obvious variant and are not capable of use together because each test circuit behaves and functions distinctly.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. A telephone call was made to Daniel R. McClure on 8/09/2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 2858

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
